

Cheryl L Anderson, PhD, Director

has degrees in Political Science, Urban & Regional Planning, and International Relations, with an emphasis on Disaster and Climate Risk Management, Adaptation and Resilience Planning. In her early career, she was a Peace Corps Volunteer in Micronesia and gained experience in community-based risk reduction and in coordinating projects for water resource management, risk communications, agricultural enhancement and food security, and protection of marine habitat. As the Director of the UH SSRI Hazards, Climate, & Environment Program, she managed more than \$3 million of projects related to community and government planning and risk reduction, and served on Pacific regional and local advisory boards for risk reduction and resilience. Her research and interest in gender equality has enabled participation in global advocacy including the World Conferences on Disaster Risk Reduction in Kobe and Sendai, as well as UNFCCC conference of parties (COP) meetings. Areas of research interest include: gender and indigenous knowledge systems, disaster risk reduction, community resilience planning, early warning systems, and linkages of community to national, regional, and international risk reduction.
